

What's the problem?

We're running out of natural resources and drowning
in our own ~~shit~~ waste.

Consumption

Earth Overshoot Day was on August 8th, 2016. That day we had **used 100%** of the earth's **natural resources**.

Waste

The UK throws out over **£1bn** of re-usable or recyclable goods **every year**. Humans are the only species who waste.
